

Delineator

Posted by rpeterson@wcec.com - 2009/09/03 20:21

I'm new to this and need help. The Delineate button within the Delineator window won't highlight. I have selected a workspace and a geodatabase name, selected a 30 meter DEM (filled), and selected an outlet point from a point theme but the Delineate button will not become active. I did not create a flow direction or accumulation grid. In the stream grid menu the creat button will not activate either. What am I doing wrong?

Thanks in advance for any advice.
